## ***What Happened?***

Alright, so what's going on here? Weren't we supposed to learn about child themes this week? Well, yes you will. But I've decided to throw in a nice bonus lesson about CSS.

As you know, CSS is a very important part of WordPress development. Much of the layout and issues you face can be fixed with CSS. Problem is, it's not always easy to figure it out, especially if you're not particularly sure the whys and hows of CSS.

Since child themes are primarily CSS, what better time than now to put in a basic CSS course?

## ***Enter CSS Basics***

CSS Basics is a mini course I created exclusively for a private mentoring membership site. It has not been released anywhere else until now of course. The goal is to give you a bare bones understanding how CSS works and how to 'read' it.

It may seem like back pedaling after all we've learned but like everything else, I am a strong believer in understanding the fundamentals. If you understand the very most basics why and how, you'll be better equipped to build upon it and strike out on your own.

CSS Basics is a multimedia course. It consists of 3 videos – don't worry, they aren't super long, the longest one is 38 minutes. I realize not everyone is fortunate enough to be able to review the videos. That's why there's also a PDF version. Of course, in the video you'll be able to better witness what is going on so if you get a chance to, review them on video.

### **Here are the links to the course**

- 2. [Simple CSS](#)
- 3. [Table-less Layout](#)
- 4. [PDF Version](#)

## **Next Lesson...**

Alright, this time it's for real. We'll get back to our regular lesson next and jump right into child themes.
